## Nepal Living Standards Survey (NLSS)

### Codebook of Record Layouts

---

#### Household data files

NLSS household data are organized into 76 separate ASCII files, numbered RT001.DAT to RT076.DAT. Each file corresponds to a different "Record Type", with a one-to-one correspondence between record types and modules of the household questionnaire. For instance, file RT002.DAT contains records from the household roster (Section 1A of the questionnaire).

Each file contains fixed-length records of the same type. The first eight columns of each record always have the same format:

- \* Columns 1 to 3 contain the Record Type (i.e., always the digit "002" for all record in file RT002.DAT.)
- \* Columns 4 to 6 contain a three-digit Ward Number. Wards selected for the NLSS sample are numbered from 001 to 275.
- \* Columns 7 and 8 contain a two-digit Household Number. Households selected for the NLSS are numbered within each ward.

After the Household Number, extra codes may follow to distinguish different records of the same type from the same household. For instance, each record from the household roster is identified with the two-digit household member ID Code in columns 9 and 10.

After the identifiers, the answers to questions (henceforth "the variables") are recorded, with a fixed-field structure described in the rest of this codebook, according to the following labels:

CODE is an internal variable encodement.

RT is the Record Type.

FROM is the starting column of the variable in the record.

LENGTH is the number of columns used by the variable.

TYPE specifies the kind of data stored in the variable. The different types are:

QNT quantitative  
TYP typographic  
QLN qualitative, with numeric codes  
QLA qualitative, with alphanumeric codes  
CHR chronographic dates in the form DDMMYY  
CHQ chronographic dates in the form DDMMYY with ranges

REMARKS are comments about the variable, such as the encodement (for qualitative variables), whether the variable is allowed to be blank, etc.

The full NLSS data set occupies about 30 Megabytes. To save disk space, the NLSS diskettes contain PKZIP-compressed versions of the ASCII data files (file RT001.ZIP contains file RT001.DAT and so forth).

### **Additional data files**

The 76 household data files contain the original, unedited data collected by the NLSS in the field.<sup>1</sup> In addition to these files, the NLSS diskettes contains two extra ASCII files with the results of certain basic computations performed on the original data:

RT090.DAT Contains the raising factors that are needed to obtain unbiased estimates from the sample and other useful information at *the ward level*, such as district codes and names.

RT099.DAT Contains household sizes, consumption aggregates of various items and other useful information at *the household level*.

### **Auxiliary files**

The NLSS questionnaire contains more than 800 different variables and thousands of codes, which can make the task of transferring the data to tabulating programs time-consuming and error-prone, even with the help of this codebook. To assist the users of common software in this endeavor, the NLSS diskettes also contain the following auxiliary archives:

NLSS\_ARI.ZIP This archive contains Z.ARI, a single file with all variable definitions and encodements needed to structure NLSS data with **ARIEL** or **ARIEL+Plus**.

NLSS\_DBF.ZIP This archive contains 76 files with the field definitions needed to load the data into DBF files (such as those used by dBase, FoxPro and

---

<sup>1</sup> The only exception are the family roster records, from which the respondent names have been deleted in order to preserve the confidentiality of the data.

other data base managers). The encodements of qualitative variables are not included.

NLSS\_SAS.ZIP This archive contains 76 files with the *infile*, *label*, *proc* and *value* statements needed to load the data into SAS

NLSS\_SPS.ZIP This archive contains 76 files with the *DATA LIST*, *VARIABLE LABELS* and *VALUE LABELS* statements needed to load the data into SPSS

NLSS\_STA.ZIP This archive contains the 76 *DCT* dictionary files (with variable definitions) and 76 *DO* files (with *label define* and *label value* statements) needed to load the data into STATA.
